Recommendations for the implantation of the Pericarbon Freedom™ stentless valve

Beholz S, Hunter S, Infantes CA, Zussa C

Based on their experience of 1,000 subcoronary implantats of the Sorin Pericarbon Freedom™ stentless valve the authors give recommendations for the exact implantation technique. This article illustrates basic issues in the implantation technique with respect to continuous and interrupted suture in order to enable beginners as well as experienced surgeons to avoid some of the pitfalls. Additional remarks to sizing and early intraoperative echocardiographic findings complete this technical overview.
